

GET MORE FROM ACOUSTIC TELEMETRY WITH THE NEXTRAK SYSTEM

The world's most advanced acoustic telemetry system, NexTrak delivers improved performance and more reliable, robust data today while also setting the stage for the next frontier of aquatic animal tracking. Each component plays a different role in supporting your study, and using them together unlocks the system's full potential. Whether you're building a new array or adding to an existing one, NexTrak offers the flexibility of forward-and-backward compatibility to meet your research needs.

NEXTRAK RI RECEIVER

Experience 40% greater range and up to 2x more detections with the NexTrak R1 Receiver.

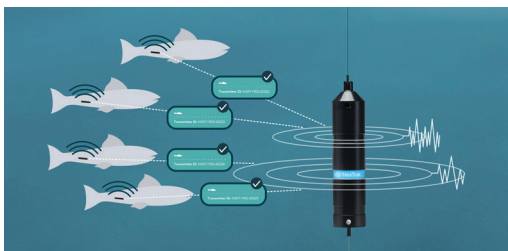

NEXTRAK AR RECEIVER

Enjoy all of the benefits of NexTrak now in acoustic release for easier deployment and retrieval.

FATHOM SOFTWARE

Offload receiver data in the field using your mobile device and analyze complete datasets seamlessly, all in the Fathom platform.

INCREASED RESIDENCY (IR) CODING

This new tag coding leverages NexTrak receivers to increase residency limits and boost detection rates by up to 5x. Talk to our team about adding IR coding to your next tag order.
